DOMINIC SAVIO KINDERGARTEN, NERUL

CCA – CLAY MOULDING

REPORT

By Tr. Priya Pereira

Dominic Savio Kindergarten conducted a Co-Curricular Activity (CCA) on "Clay Moulding" on 8th October 2026 for the students of Nursery, Jr. KG and Sr. KG. The activity aimed to provide children with an engaging hands-on learning experience while developing their creativity, imagination and fine motor skills.

Students brought clay from home and created models based on age-appropriate themes related to nature:

* Nursery: Fruits
* Jr. KG: Insects
* Sr. KG: Aquatic Animals

The activity was conducted during school hours in the respective classrooms. Students enthusiastically shaped and moulded the clay using their hands, along with optional moulds and cutters. They created colourful models based on the given themes and displayed their completed work on labelled writing pads as instructed.

Clay moulding provided the children with opportunities to strengthen their finger and hand muscles, improve hand-eye coordination, develop concentration and express their ideas creatively. The activity also encouraged children to make independent choices and take pride in their work.

The classrooms were filled with enthusiasm as the students explored different forms and shapes and confidently showcased their creations. The activity provided a joyful and meaningful learning experience, encouraging creativity, sensory exploration, imagination and self-expression.

The CCA concluded on a cheerful note, with students proudly presenting their clay models. Their creations reflected their understanding of the respective themes, individual efforts and growing artistic skills.

Overall, the activity was successfully conducted and provided the young learners with an enjoyable opportunity to learn through creativity and hands-on exploration.
